

Project documentation : Charitable Online Donation/Purchase System

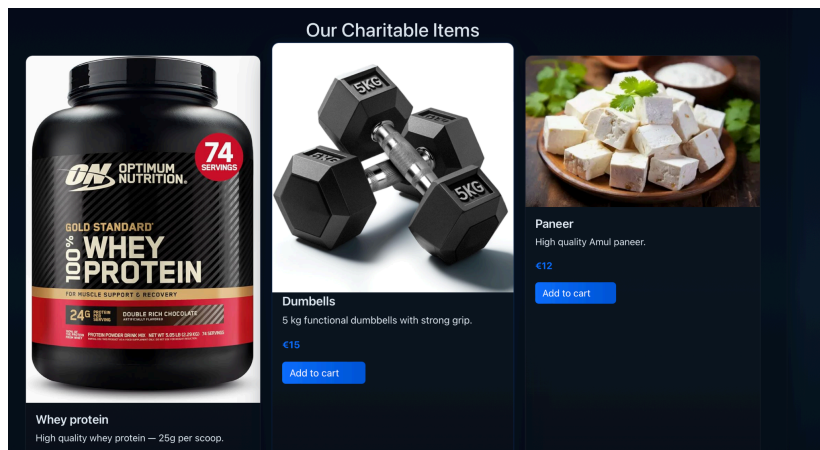

5 aspects from bootstrap

1) Navbar

- Classes used: `.navbar`, `.navbar-expand-lg`, `.navbar-brand`, `.navbar-nav`, `.nav-link`

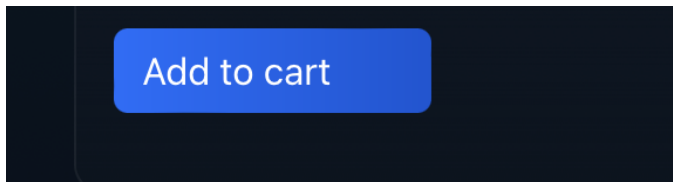

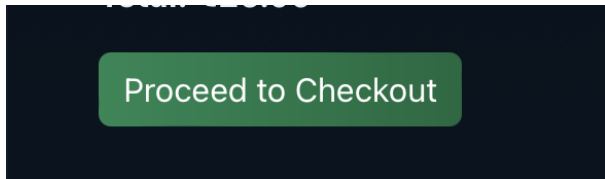

- Where: top of the page. Provides site navigation (Gallery / Checkout). Tells users where to go and collapses on small screens. Its more semantic and for aesthetics you can't access checkout without submitting order from the nav bar

2) Grid system + Cards

- Classes used: `.container`, `.row`, `.col-12`, `.col-sm-6`, `.col-md-4`, `.card`, `.card-img-top`, `.card-body`, `.card-title`

- Where: products gallery (`#products-section`).
Each product is a Bootstrap card placed inside the responsive grid. This ensures 1/2/3-column layout at different breakpoints.

3) Buttons

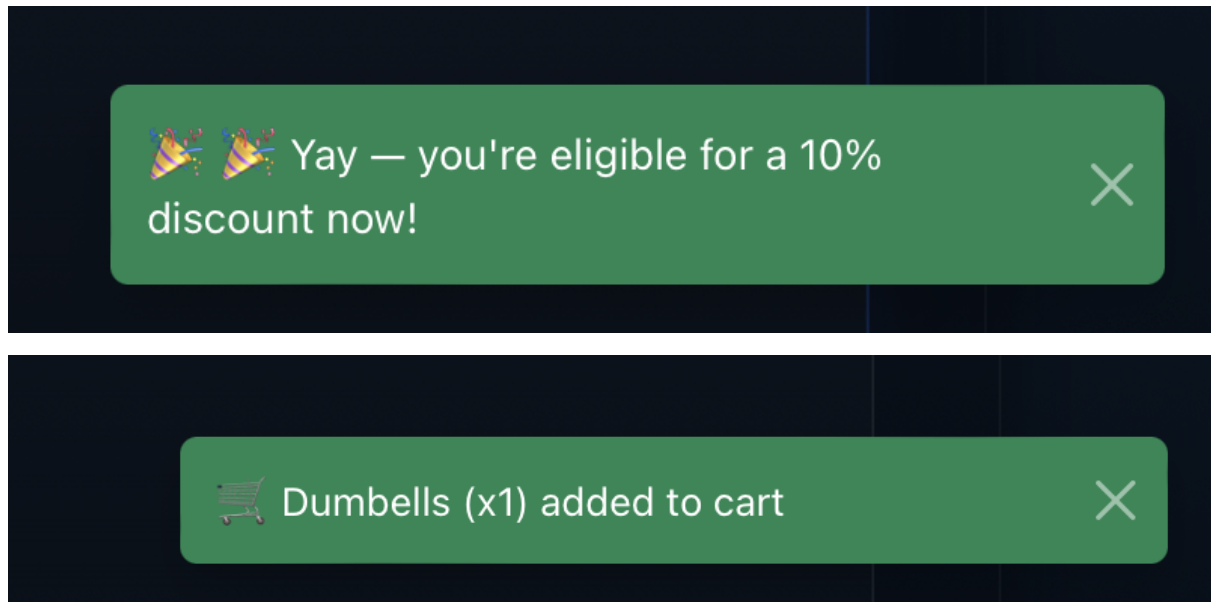

- Classes used: `.btn`, `.btn-primary`, `.btn-success`, `.btn-close`
- Where: "Add to cart" (`btn-primary`) and "Proceed to Checkout" (`btn-success`). The checkout button uses the disabled attribute when the cart is empty.

A checkout form titled "Checkout Information" with a dark background. It contains five input fields, each with a label above it: "Full Name", "Email", "Phone Number", "Address", and "ZIP Code". The labels are in a light gray color, and the input fields are dark gray.

4) Forms / Form controls

- Classes used: `.form-control`, `.form-label`

- Where: checkout form (#order-form). Inputs use Bootstrap form styling. JavaScript performs validation before submission.

5) Toasts (notifications) and List Group

- Classes used: `.toast`, `.toast-body`, `position-fixed`, `.list-group`, `.list-group-item`

- Where: a toast container is added at the bottom-right to show "added to cart" and discount eligibility messages. The cart uses a list-group to show items and prices.
